

DESCRIPTION

The HHM series broadband harmonic mixers covers full waveguide bands from 18 – 110 GHz. They utilize a low loss finline structure mated to a GaAs Schottky beam lead diode for minimum conversion loss and maximum bandwidth. The millimeter wave RF frequency is down converted (using a low cost microwave LO) to a lower frequency, which can in turn interface with a spectrum analyzer or frequency counter.

Two terminal mixers (waveguide RF, combined coaxial LO/IF port) units are available for systems equipped with an internal diplexer.

Three terminal mixers (waveguide RF, coaxial IF port, coaxial LO port) units are available for systems without an internal diplexer.

Applications

- Spectrum Analyzer Mixers

- Frequency Measurement

Features

- No Input Bias Required
